OPERATIONS / PROJECT REPORT

Q2 Service Reliability Review

Fictional sample document | April - June 2026

Overview

The Atlas service handled 1.8 million requests during Q2.
Availability was 99.93%, below the 99.95% quarterly target.
The largest incident was a 37-minute outage on May 14.

Incident review

A database connection pool limit caused the May 14 outage.
The team increased the pool limit, added connection saturation alerts, and tested the fix under peak traffic.

Quarterly measures

Measure	Result	Target
Availability	99.93%	99.95%
Requests	1.8 million	1.5 million
P95 latency	182 ms	200 ms

Next steps

Run a monthly saturation test and review alert thresholds.
Owner: Platform Engineering. Due date: July 15, 2026.

Fictional example for document review. No real company data.
